Integrated Particulate Sampling Probe (Filter-Cartridge Type)

YQ-1230

Overview

The YQ-1230 filter-cartridge sampling probe is primarily used to measure particulate concentrations from stationary sources, using a No. 3 standard filter cartridge.

Technical features

- Integrated design supports simultaneous particulate sampling and flow-velocity and flue-temperature measurement.
- Multiple sampling-nozzle models are supplied.
- Stainless-steel sampling probe.

Standard accessories

- Fabric sleeve
- Sampling nozzle

Source and review notes

- The brochure lists no separate specifications or standards for this product; its accessory illustration labels only the fabric sleeve and sampling nozzle, so the complete delivery contents require confirmation.
- This filter-cartridge variant is recorded separately from other YQ-1230 variants.
- English translation has not received native-speaker technical review.
