Blank Sampling Probe

YQ-1233KB

Overview

The YQ-1233KB collects blank samples during low-concentration particulate sampling. It can be quickly installed or removed on an existing low-concentration sampling probe while normal sampling continues.

Source and review notes

- The brochure page supplies no separate specifications, standards, feature list or accessory list for this product; no details from other models have been added.
- Product performance has not been independently verified.
- English translation has not received native-speaker technical review.
