Cooking Oil-Fume Sampling Probe

YQ-5233YY

Overview

The YQ-5233YY collects cooking oil fumes and includes flue-temperature measurement. The brochure describes its use with a particulate instrument for oil-fume sampling and lists environmental protection, health, labor, safety supervision, military and research applications. Compliance and compatibility have not been independently verified.

Technical features

- Stainless-steel sampling probe.
- Compact, lightweight and portable.
- Integrated design supports simultaneous oil-fume collection and flow-velocity and flue-temperature measurement.
- Multiple sampling-nozzle models are supplied.

Standards listed in the brochure

- GB18483-2001 - Emission standard for cooking oil fumes

Standard accessories

- Main unit
- Fabric bag
- Oil-fume sampling nozzle
- Oil-fume filter cartridge

Source and review notes

- Performance and the standard reference are transcribed from the brochure and have not been independently verified.
- English translation has not received native-speaker technical review.
